

## Consumer Complaint Databases

### Committee on Administration and Management

#### Proposed Recommendation | June 10, 2016

1           Some federal agencies maintain records of consumer complaints and feedback on  
2 products and services offered by private entities. Taking advantage of recent technological  
3 developments, several agencies have recently begun to make such information available to the  
4 public through online searchable databases and downloadable data sets that contain complaint  
5 narratives or provide aggregate data about complaints. Examples of such online searchable  
6 databases include: the Consumer Product Safety Commission’s database of consumer product  
7 incident reports (“Saferproducts.gov”); the National Highway and Traffic Safety  
8 Administration’s database of recalls, investigation, and complaints (“Safercar.gov”); and the  
9 Consumer Financial Protection Bureau’s database of financial products and services complaints  
10 (“Consumer Complaint Database”).<sup>1</sup>

11           As documented by the Executive Office of the President’s National Science and  
12 Technology Council, agencies are constantly improving databases that publish consumer  
13 complaints and information, and are gradually developing best practices for such disclosures.<sup>2</sup>  
14 Two policy considerations are significant in this process. Agencies must have the flexibility to

---

<sup>1</sup> Other examples located by the Administrative Conference include: the Department of Transportation’s monthly data sets on the number and types of complaints against airlines (“Air Travel Consumer Report”) (only aggregated data about complaints is made public, with the exception of animal incident reports, for which a narrative description is provided); the Federal Trade Commission’s consumer complaints database (“Consumer Sentinel”) (only aggregated data about complaints is made public); and the Federal Communications Commission’s database of unwanted calls and consumer complaints (“Consumer Complaints at the FCC”) (complaint narratives are not provided). Some databases and data sets include reports from both consumers and manufacturers, such as the Food and Drug Administration’s database of reports of suspected device-associated deaths, serious injuries, and malfunctions (“MAUDE”), as well as its downloadable data sets of adverse events and medication errors (“FAERS”).

<sup>2</sup> See EXECUTIVE OFFICE OF THE PRESIDENT, NATIONAL SCIENCE AND TECHNOLOGY COUNCIL, SMART DISCLOSURE AND CONSUMER DECISION MAKING: REPORT OF THE TASK FORCE ON SMART DISCLOSURE 15 (May 30, 2013).

15 provide information to the public to facilitate informed decisionmaking. At the same time,  
16 agencies should inform the public of the limitations of the information they disseminate.<sup>3</sup> The  
17 following recommendations aim to promote the widespread availability of such information  
18 while ensuring the continued integrity of complaints databases and data sets.

### RECOMMENDATION

19 Agencies that make consumer complaints publicly available (whether in narrative or  
20 aggregated form) through online databases or downloadable data sets should, to the extent  
21 permitted by law, adopt and publish online written policies governing the public dissemination of  
22 consumer complaints through databases or downloadable data sets, which policies should:

23 1. inform users of the source(s) and limitations of the information, including  
24 whether the information has been verified or authenticated by the agency, and any procedures  
25 used to do so; and

26 2. permit entities publicly identified in consumer complaints databases or  
27 downloadable data sets to respond, as practicable, or request corrections or retractions, as  
28 appropriate.
